SKILLS

Language: English(C1) | Deutsch(A2) | **Programming & Data:** Python, SQL, Pandas, NumPy. | **Data Engineering:** Databricks, Palantir Foundry, ETL & Data Pipelines, 3D Computer Vision, Data Standardization, Process Automation. | **Visualization & BI:** Foundry, Tableau, Power BI, Streamlit, Matplotlib, Seaborn. | **Tools & Software:** VXelement (3D Mesh/Image Processing), Excel, Meshlab | **Design:** Canva

PROFESSIONAL EXPERIENCE

Praktikant/Data Science Intern, Ottobock SE & Co. KGaA — 02/2026 – 08/2026, Duderstadt, Germany

• Designed and automated a **3D data preprocessing pipeline** using **Python** to clean, align, and standardize complex **spatial data (mesh/STL files)** and clinical records.
• Engineered data-driven **Machine Learning models** to capture 3D spatial mappings, automating clinical design processes.
• Established quantitative evaluation frameworks utilizing advanced **spatial metrics** to validate model accuracy against clinical standards.

Data Analyst Intern, Lear Corporation — 02/2025 – 04/2025, Pune, India

Implemented **ETL pipelines** in **Palantir Foundry**, integrating data from 7 manufacturing plants and reducing reporting time by 85%.
• Designed an interactive dashboard displaying **33 KOTs, 8 KPIs**, and **volume data per plant,** with side-by-side **forecast vs actual** comparisons.
• Created an **ontology** to structure business entities and converted raw HFM data into actionable insights.

EDUCATION

MSc Data Science, University of Europe for Applied Sciences — 09/2024 – Present, Berlin, Germany
Grade: 1.7

B.Tech in Information Technology, Pimpri Chinchwad College Of Engineering — 08/2020 – 04/2024, Pune, India
Final grade: 1.8

Higher Secondary School, Pratibha Junior College — 2019 – 2020, Pune, India
- Percentage: 69.8

PROJECTS

AI Driven Predictive Maintenance System
- Developed an end-to-end **ML solution** to **detect rare industrial machine failures** within highly imbalanced datasets.
- Engineered physics-informed features and implemented a robust **Random Forest Ensemble**, improving precision from 17% to 98% and reducing false alarms.
- Deployed a dual-model logic pipeline via a **Streamlit Dashboard** that instantly predicts failures and incorporates a **root cause model** to diagnose exactly *why* the system fails, achieving **98.95% diagnostic accuracy**.

Document based QA Chatbot
- Developed an **AI-powered Q&A chatbot** using **RAG (Retrieval-Augmented Generation)** with **LangChain, Gemini API, and PyPDFLoader**.
- Built a **Streamlit dashboard** for real-time interaction, reducing manual document search time by **~80%**.
- Integrated **embedding-based search (text-embedding-004)** to enhance accuracy and scalability.

Big Mart Sales Prediction
- Processed and analyzed 7,000+ sales records, performing missing value treatment and categorical encoding.
- Trained and tuned an **XGBoost regressor**, applying feature engineering to improve model generalization.
- Delivered actionable insights uncovering product visibility, store type, and location-based demand drivers.

Face Mask Detection using CNN
- Developed a CNN model, achieving **97.5% accuracy** on real-world and **96.8% on synthetic datasets**.
- **Augmented 3,800+ images** with Python & OpenCV to improve model generalization and robustness.
- Deployed a **real-time detection pipeline** (TensorFlow, Keras, OpenCV), achieving ~**98% test accuracy**.
- Proposed scalable applications for **PPE detection and workplace safety monitoring**.

CERTIFICATES

Introduction to Statistics ((Stanford University)) | **Foundations of Project Management** ((Coventry University)) | **IBM Data Science**

PUBLICATIONS

Face Mask Detection using Convolutional Neural Network , IEEE — 07/2023

VOLUNTEER

Information Technology Student Association, Event Team Member — 04/2022 – 05/2023

• Carried out technical and non-technical events with a team of 40 students throughout the year.
• Plan and manage the flagship event "Praxis" of the Information Technology Department.
